

Dear Customer,

As our customer, our primary goal is to support you in the optimal performance of your work. If, despite our best efforts, a device fails to function as desired, then we would like to request that you observe the following points, in the interest of ensuring that the claim is processed rapidly.

Initial inspection: With the help of the operating manual, please check whether a defect or malfunction has actually occurred or whether this is simply the result of operator error, before returning the device. Additional support is available at

Hotline +49 (0)5206-999-767

or from your responsible sales representative.

Transport/freight: Please send the devices back to us in their original or equivalent packaging and attach any necessary transport safety screws or similar equipment.

Unauthorized intervention, removed ID numbers/name plates, improper handling or transport damage resulting from inadequate packaging will void the warranty.

Please return the goods carriage paid. We send back warranty cases free of charge.

Repairs: We will provide you with a non-binding cost estimate for repairs carried out outside of the warranty period. The flat charge for providing a cost estimate is € 100.00 if no repairs are performed (plus freight and packaging costs if the device is returned to you without being repaired).

With kind regards
BST eltromat International GmbH
